

YUG PATEL

yugpatel213006@gmail.com | +91 9737284671 | Anand, Gujarat, India | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

SKILLS

Languages: JavaScript, Java, HTML, CSS

Frontend: React.js, Tailwind CSS

Backend: Spring Boot, Spring Security, Node.js, Express.js

Databases: PostgreSQL, MongoDB

Core Concepts: OOP, Data Structures & Algorithms

Tools & Other: Git, GitHub, Postman, Maven, pgAdmin, JWT, REST APIs, Hibernate, JPA

PROJECTS

DukaanFlow — Multi-Tenant Inventory & Billing Platform

[GitHub ↗](#) [Live ↗](#)

Java 21 · Spring Boot 3 · Spring Security · PostgreSQL · React 19 · JWT · iText 7

- Architected a multi-tenant SaaS data model with strict shop-level data isolation, enabling multiple businesses to securely share one backend with zero cross-tenant data leakage.
- Secured the platform end-to-end with JWT authentication and Spring Security, implementing stateless sessions and role-based access control across every API route.
- Designed and normalized an 8-entity PostgreSQL schema with JPA/Hibernate, and built shop-scoped CRUD APIs for products, categories, customers, and invoices.
- Automated tax-compliant PDF invoice generation with iText 7, including shop branding and itemized cost breakdowns.
- Built a Profit & Loss analytics engine using JPQL aggregation queries to compute product-wise revenue, cost, and margin in real time.
- Shipped a responsive React dashboard with date-filtered invoice history and a mobile-first card layout for on-the-go shop owners.

Watchly — Website Change Monitoring Platform

[GitHub ↗](#)

React · Node.js · Express.js · MongoDB · SHA-256 · Jest

- Built a full-stack monitoring tool that scrapes public URLs, fingerprints content via SHA-256 hashing, and triggers automated email alerts the moment a change is detected.
- Hardened the scraping service against SSRF attacks by validating target IPs against private/internal ranges, and designed a passwordless, hashed-token authentication flow.
- Validated reliability with a Jest/Supertest test suite covering authentication, monitor creation, and change-detection logic.
- Prevented abuse with multi-layer rate limiting at both the API and per-recipient email level.
- Engineered a node-cron background scheduler with retry/backoff logic and a three-state status model (active/changed/unreachable) to accurately reflect real-world scraping outcomes.

EDUCATION

G.H. Patel College of Engineering & Technology

B.Tech in Information Technology · CGPA: 8.45

Vallabh Vidyannagar, Anand

2023 – Present

Gujarat Higher Secondary Education Board (HSC)

71.07% · PCM

Anand, Gujarat

2021 – 2023

Gujarat Secondary Education Board (SSC)
